Autoscope® SmartMouse™

Mouse & Monitor capabilities make Video Detection quick and easy!

Description

Traffic engineers and signal technicians wishing to easily set-up and configure *Autoscope* video detection systems have the ability to do so in a matter of seconds without using a laptop. By simply connecting a mouse and a video monitor to any *Autoscope Solo Pro II*, *Autoscope 2020*, *Autoscope RackVision*, *Autoscope RackVision Terra*, or *Autoscope Solo Terra*, you can configure stop-line and advance extension video detection zones in moments, without extensive training.

Autoscope SmartMouse uses basic Mouse & Monitor capabilities, coupled with the *Autoscope Wizard*® on-screen prompts to make the set up and configuration of video detection the simplest and fastest in the marketplace. *SmartMouse* allows you to tailor your detection to specific traffic lanes and individual detection zones for optimum detection accuracy and reliability.

For further information on the *SmartMouse* Mouse & Monitor or on other *Autoscope* video detection products and capabilities, please contact your local Econolite Account Manager or visit www.econolite.com.

Benefits

- Easy set-up
- No laptop needed
- Minimum training required
- Add delay and extend timing easily
- Works with all Autoscope video detection systems
- Supports TS2 and other controllers
- Supports lane-by-lane outputs
- Supports separate advance extension outputs
- Modify existing detection zones
